Subject: URGENT: Fact-checking article on the WV water contamination

Dear Cathy,

I am a fact-checker at the New Yorker magazine and I'm working on an article about the water contamination in West Virginia for our online version. I would like to confirm that the following information on MCHM, the chemical leaked into the water, is accurate:

**MCHM is one of the 62,000 chemicals that were already in use when TSCA, the country's main chemical safety law, was passed in 1976.

**All of these chemicals were presumed to be safe, and EPA was not required to determine their safety.

**To require testing of these chemicals under TSCA, EPA must first provide evidence that the chemical may pose a risk.

I hope you can get back to me soon. We would like to publish this article this afternoon.

Many thanks for your time.

Best,

--
